

# ELASTIC BEARING OF BUILDING SERVICE INSTALLATIONS

Buildings

*Sylomer® and Sylodyn® PU materials*

*Isotop® spring isolator*

## **Sylomer® & Sylodyn®**

Our polyurethane materials Sylomer® and Sylodyn® developed in our own laboratories and manufactured inhouse are suitable for universal use, deliver maximum isolation performance and have proven themselves time and again under a range of conditions in various installation locations. They are used as bearings for floors, stairs, landings, machine foundations, to decouple ceilings and as dry lining as well as in timber construction.

## **Isotop® elements**

Isotop® products are isolators that, depending on the requirements of the application, are produced in combination with Sylomer® and Sylodyn®. They are mainly used for low-frequency bearing of building service installations.

### **Product benefits**

- Long service life
- Maintenance-free
- Simple integration into the construction process
- Specifically designed to meet different building acoustics requirements
